SUPERDIE I – KIRKSITE

(4% aluminum, 3% copper, 93% zinc) Fluidity: Good. Casting Temperature: 780°F-835°F. Sold in ingot form. Each ingot weighs approximately 2.5 lb. Kirksite metal is a low melting alloy that can be used to make simple dies. It melts like lead and solidifies as hard as steel. The male die is placed in the molten Kirksite and removed just before the material solidifies.
